DEC 1951 31-40

\_ 2

- 7. Pilot Boat Pilot came aboard from a US-type, diesel tug with high forecastle, named the SIRBU at 300615B Apr 54. Pilot spoke English and performed his work satisfactorily. Pilotage is compulsory and vessels may not enter harbor at night.
- 8. Berth Vessel berthed in petroleum basin at designator C. Soundings taken around vessel at berth showed 28. Bepth is greater at berth labeled designator F.
- 9. Boarding Inspection Boarding party composed of armed searchers, doctor, and woman tank inspector came aboard at berth. Inspection was thorough, and radar, cameras, and film were sealed. Radio was not sealed. Personnel conducting search showed interest in US magazines they found in craw's quarters.
- 10. Cargo Handling Loading was extremely allow and 70 hours were required to load 13559 tons cargo between 301836B Apr and 031506B May 54. Only two 8" lines were available on dock and at times during loading, cargo ceased flowing for no explained reason.
- 11. Surveillance Armed guard came aboard with pilot, remained beside him at all times, and was last to leave vessel upon departure. Armed sentries were on constant guard on the dock. All personnel leaving vessel even for painting hull had to present passports to gangway guard, which were returned to individuals when returning aboard vessel.
- 12. Merchant Shipping Present A Danish merchant freighter of approximately three thousand tons was leading grain at berth labeled designator B. A Pelish merchant freighter of approximately three thousand tons was taking abourd a lumber cargo at berth labeled designator E. Several small coastal freighters of undetermined nationality were also loading lumber at berths adjacent to the Polish vessel. The seven thousand ton Soviet merchant tanker JOSIF STALIN was loading aviation gasoline for Sevastopol, USSR, at berth labeled designator F. She made two calls during period of source's visit to port. She arrived empty without ballast and loaded from six 8" lines in 15 hours. She was described as looking like a "skinny herse" because of ribs showing through hull, which possibly have resulted from navigation in ice.
- 13. Mayal Activity Six destroyer-type naval craft with two stacks and prominent anticircraft batteries, and approximately 350° in length were observed berthed along the west side of the East Breakwater at designator G. In addition, a sailing vessel and the KING CAROL yacht, both used as training vessels, were berthed at the same wharf. On 1 May 54 all naval craft along wharf were fully dressed and performed heliday exercises immediately outside harbor entrance. Loudspeakers carried propagands speeches and music in the area of the naval installation.
- 14. Liberty Ashore Ealf the crew was permitted liberty ashore each night according to port regulations, provided their names appeared on a list submitted 24 hours in advance. Passports were given to gangway sentry and reclaimed when returning to vessel. A crew member was fined WS\$70 for having lighter flints in his possession when going ashore. Crew members found little to do or see in city.
- 15. Beparture Vessel departed subject port on 4 May 54 after a thorough search of vessel. Inspection party was searching particularly for stowaways, to the extent of searching the double bottom spaces. Pilot and armed guard were dropped at designator B.

5X1	Comment : It is noted that this
5X1	report is not the same as DIO, 6MD Report No 223-54.
O/ ( )	Therefore, this report confirms observations reported in that report concerning
rete Net	the presence on two occasions of the Soviet tanker JOSIF STALIN in subject port
	during source's visit during May 1954. This report further identifies the Soviet
	vesseles cargo as aviation gesoline, and her port of destination Sevastopol,
	USSR. It was reported previously that Soviet tankers are accorded preferential
	treatment in expeditious leading and discharge of formalities. The location of
	destroyer-type (DD) naval craft along the East Breakwater is also noted herein
	and in previous reports.

On file in CIA Library is photograph of HO Chart No 4197 with appropriate alphabetical designators.
